1. **FITRAH** ARGUMENT

Children are born believers in God, academic claims

Children are "born believers" in God and do not simply acquire religious beliefs through indoctrination, according to an academic.

Dr. Barrett: "If we threw a handful on an island and they raised themselves I think they would believe in God." Photo: John Taylor

Dr Justin Barrett, a senior researcher at the University of Oxford's Centre for Anthropology and Mind, claims that young people have a predisposition to believe in a supreme being because they assume that everything in the world was created with a purpose.

He says that young children have faith even when they have not been taught about it by family or at school, and argues that even those raised alone on a desert island would come to believe in God.

"The preponderance of scientific evidence for the past 10 years or so has shown that a lot more seems to be built into the natural development of children's minds than we once thought, including a predisposition to

Belief and the brain's 'God spot'

Scientists say they have located the parts of the brain that control religious faith. And the research proves, they contend, that belief in a higher power is an evolutionary asset that helps human survival. Steve Connor reports
